

proyeco

About **Proyeco**

We have been providing for 35 years a wide range of integrated services in Architecture, Installations, Urban Planning, Development and Promotion, Construction, Consultancy, Project Management, Energies and Environment including Civil and Building projects.

We base our work on the ISO 9001, ISO 14001, ISO 45001 and UNE 166002 standards, in which we are certified. Our constant technological innovation has allowed us to obtain the INNOVATIVE SME Seal from the Ministry of Science and Innovation of Spain.

In addition, we have voluntarily adhered to the EMAS III regulations and to "The Global Compact" of the United Nations.

Mission & Values

Born with the vocation of customer´s service

We provide engineering and architectural services to our clients, with a practical and functional approach adapted to the project needs.

OUR MISSION

To make your project ours
Growing while maintaining our essence and integrating borders is our priority

We offer our clients the global vision they need, and we provide the best quality service thanks to our teamwork, technical expertise, global vision and excellent client relationships.

OUR VALUES

Commitment, integrity & sustainability
These three values are the basis of our company's philosophy. They are present in our daily life as we provide quality services and achieve excellence with our customers, suppliers, and employees.

Corporate Responsibility

OUR COMMITMENT

Our commitment: Social Responsibility,
Quality Management, the Environment
and Safety and Health at Work

ONU Global Compact

As part of our corporate culture, we have been renewing our commitment to the Global Compact annually, since 2011. This commitment implies our support of the ten principles related to human rights, workplace, environment, and fight against corruption, and spreading it among all its stakeholders, customers, suppliers, and workers, in addition, to collaborate in social development projects, with different foundations and administrations.

Sustainable Developments Goals

Our commitment to sustainability is reflected by achieving the Sustainable Development Goals (SDG). These United Nations objectives, require the active involvement of companies, and we, through our projects and CSR activities, contribute to key objectives related to gender equality (n° 5), water (n° 6), energy (n° 7), sustainable communities (n° 11) and ecosystem (n° 15).

Services

All our knowlegde

BIM METHODOLOGY

Integrated Solutions that allow us to define the difference and anticipate situations.

CONSULTING SERVICES

Feasibility studies, negotiation processes, due diligences and company processes optimization.

MANAGEMENT

Project management, construction management and management contracting.

ENGINEERING

Inspection of concessions, civil engineering, hydraulics, urban transport and soil engineering.

ARCHITECTURE

Author architecture, interior desing, landscaping, restoration and rehabilitation, urbanism and architecture

ENVIRONMENT

Environmental impact studies, socioeconomic studies, water treatment, waste and recovery.

BIM Methodology

Building Information Modeling

The implementation of the BIM technology in our projects adds value to our clients and integrates our teams.

Building Information Modeling (BIM) as a visualization and collaborative tool helps us identify and prevent extraordinary and unforeseen situations throughout the different stages of our projects allowing us to speed project delivery, lower costs and maintain the highest quality standards.

Consulting Services

Our consulting services are customized to meet our client's needs. The excellence of our services comes from our technical expertise across a range of engineering disciplines, architecture, sustainability, economics and finance, as well as our practical experience and professional background in a wide variety of markets, regions and countries.

Management

Project Management

PROJECT MANAGEMENT

Our Project Management services offer its clients an integral solution for the management of any type of civil, construction or building project, from its conception to its commissioning.

Management

Construction Management

Coordination and management services for the construction of all types of infrastructure, building and engineering projects, through the management and supervision of the contractors directly hired by the client to develop the different units of the project.

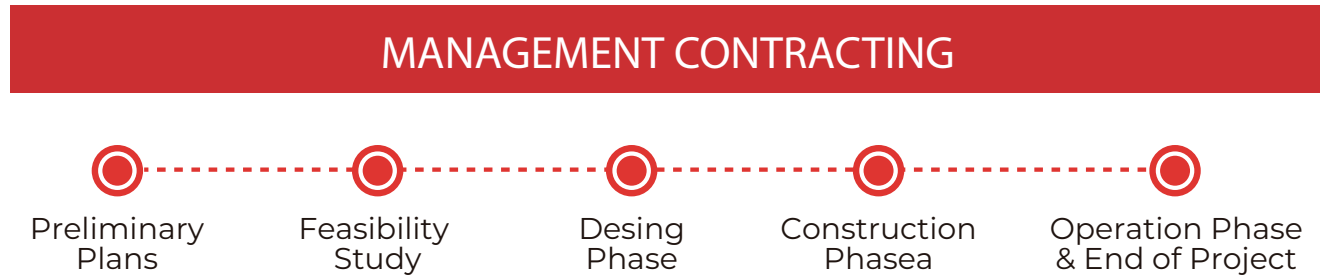

CONSTRUCTION MANAGEMENT

Management

Management Contracting

Management Contracting is a strategic service we provide within the Project Management solution, which offers our clients the possibility to completely outsource the management of their contracts, from their initial phase to their completion.

Engineering

Concessions Check

For more than 10 years, we have offered our services of auditing, consultancy, inspection and supervision of road concessions, combining methodologies of project management and monitoring, and new technologies, with the aim of offering a comprehensive service to the owners, concessionaires, maintainers and / or operators of these infrastructures.

Engineering

Civil Engineering

Our Civil Engineering branch offer its services from the first sketches to the start-up of the infrastructure, with skilled professionals that adapt to the needs of every project. Our projects include highways, bridges, canals, ports, airports, maritime works, lines, stations and electrical substations, and within these its foundations, structures, paving, signaling, drainage, adaptation of interference from existing networks and effects of land.

We share in all the services we provide a vocation of service that, together with our core values, experience, trust, profitability and commitment, allows us to deliver Quality Projects that meet the needs and expectations of our customers.

Engineering

Hydraulics

We have a business area focused on offering innovative and efficient comprehensive services in the development of Water Sanitation and Distribution Projects in urban and interurban networks, Large diameter collectors, Sewer networks, Sewage and drinking water pumping stations, Wastewater Treatment Plants, Water Treatment Plants and Deposits.

Engineering

Soil Engineering

We add value to our services, through constant training, expertise of the new techniques and technologies existing in the market and with innovation in our own work procedures. Our team of highly qualified Engineers offer an efficient service and a careful treatment while always remaining accessible to the client.

We add value to our services, through constant training, expertise of the new techniques and technologies existing in the market and with innovation in our own work procedures. Our team of highly qualified Engineers offer an efficient service and a careful treatment while always remaining accessible to the client.

Engineering

Railway Engineering

We offer our services in Railway Engineering covering all the phases of the design, from preliminary studies, conceptual projects, survey and diagnosis of existing track, project of stroke or improvement thereof to urban and environmental integration of the entire system, making our Real services comprehensive projects.

In addition, we have wide experience in supervision and inspection, in operation and maintenance and in conservation of roads, applying its methodology of continuous improvement.

Architecture

Personalized Desings

We offer comprehensive Architecture services including the design of conceptual projects, execution projects, as-built projects and more, for all types of residential, institutional, commercial and industrial buildings.

Our designs combine beauty, functionality and innovative space distribution, with the ongoing research and use of new technologies in construction systems and materials.

Architecture

Urbanism

We are experts in land management and urban development, relying on our architectural, engineering and construction services, we analyze investment opportunities on land in any stage of urban development.

We manage and collaborate throughout the land transformation process, carrying out project drafting, construction management, supervision and execution of works in municipal planning plans and urbanization projects.

Within the real state development field, our services focus on feasibility studies, technical and economic feasibility studies, prior implementation studies, market studies, residential development studies, monitoring and management of real estate developments, from its conception to after sales.

Architecture

Restoration & Rehabilitation

We develop Heritage Restoration and Rehabilitation with personalized planning, understanding the needs of every project.

We strive to offer the best advising in terms of design, finishes and materials, always committed to our Quality, Safety and Environmental Policies.

Architecture

Interior Desing

We consider the needs and preferences of our clients to adapt each space and project for their use, while also regarding the fundamental structural and functional conditions.

We take great pride in our care for detail and innovative solutions, through all the stages of a project, which allow us to bring spaces full to life and true to their purpose.

Environment

We integrate the environmental and social component in each project, sharing the commitment and sensitivity of society and for the Protection and Conservation of the Environment, as well as for the Social Impact that projects can produce on environmental factors.

Commitment and respect for the environment is one of the strategic objectives of any territory or country, so we provide our services with a maximum level of commitment to the protection of the Environment and with professionals certified by authorized institutions and organizations.
